

Context, Research and Information

I have played competitive tennis every summer for as long as I can remember, and one of the worst things is when players are away. Being in a team of only four meant this season we needed a fill-in player on average every second week, and every time either we haven't been able to find one in time or on a Saturday morning at the earlier competition, someone playing at the club ends up getting asked to stay and play again. Not only does this hurt competition results, especially when a team has to default, but it also is a cause of stress for anyone having to find an extra player.

Problem

When a team needs a fill-in, they send our junior administrator a text letting her know the date and if they need 1 or 2 fill-ins. She then has to work out who can fill in for a certain team and contact people to ask. This involves remembering which teams have extra players who may be standing down or who play on a different day or at a different time and would be available. A lot of this is often done from memory, and there are situations where someone could have filled in but they were unaware that a team needed one. Approximately two to ten teams need at least one player to fill in each week. Each team contacts the junior administrator, who then contacts people on each team to find someone to fill in. Furthermore, this problem is even more complicated within the senior interclub divisions. There are many more rules regarding who can fill in for each other, and it is up to individual team managers to find fill-ins. Relying on each team manager means that some teams are less likely to get a fill-in because, being a big club, not everyone knows who to ask.

Pre-Existing Solutions

There is no digital solution to this problem in New Zealand at the moment. This is because there are many specific rules on who can fill in for a certain team, which are different from overseas competitions.

Solution

My idea is to create software for team managers/The Junior Administrator to make finding and keeping track of fill-ins for junior and potentially senior interclub teams less stressful and complicated.

Why has this not already been done?

The simple answer to this question is that no one had considered moving it to digital. Technology can do so much more for us now than it could even just a few years ago. Many tennis clubs rely mostly on volunteers and fundraising to run most of their programs, so many other small things get pushed to the side. When I spoke to the Junior Administrator of my club, she said that she had never considered the idea of turning to technology to help and instead had been relying on team managers to try and do it themselves if there were too many requests.

Positives & Negatives of How it's Done

	Positives	Negatives/ Potential Issues
Currently	- Preferences can easily be taken into account because of human knowledge. In this case, someone cannot play in a certain team because players don't get along, etc.	- All junior team requests go to one person who has to contact all the people individually. - Senior team managers, especially those new to the club, may not have the same connections that others have, making it harder for them to find fill-ins. - Teams who play at the same time but have extra players often aren't considered because they get forgotten about.
If it was digital	- Anyone can find a fill-in for their team regardless of their knowledge of other teams/players - It is much easier to keep track of which teams need a fill-in for when - Could automatically provide information to the player filling in about where the team is playing	- Not having the human knowledge of certain people not playing with others due to personalities - Not knowing who's in each team for a new season.

How can these potential negatives be avoided/minimised?

There is the potential to store information added by the Junior Administrator, containing player preferences, e.g., a player may not want to play with a certain team. This would have to be controlled by an admin login and secured so regular users couldn't see it.

The major issue would be future-proofing this database so that it can easily be reused from season to season. This would involve getting information from a reliable source that will be updated and creating a way for the administrator to easily add in new team data for the season.

Iteration #1 - Planning

What is it about?

This project is about creating a piece of software that makes finding fill-ins for interclub easy and less stressful. This means that at just the click of a button, anyone can easily make contact with players to find a fill-in for a team.

Who is it for?

This is to help reduce the stress on the Junior Administrator caused by managing many interclub teams needing fill-in players. Anyone, e.g. the Junior Administrator, Team managers or any team captains, could use it. As this interface could be used by anyone, I need to focus on its usability and make sure that everything is straightforward.

What does it do?

This website takes information from the user, what team needs a fill-in, what player/players are away, and when they are away. It would then take that information and return a list of teams that have extra players that would normally play at the same time, and a list of other players also available.

Relevant Implications

These are all different implications I could consider: Intellectual property, accessibility, future proofing, ethical, privacy, end user, aesthetics, social, legal, functionality, usability, cultural, health and safety.

Usability - This interface will be used by people who may have no clue how the program works, and therefore, it needs to be self-explanatory and simple.

Functionality - This program needs to function well so that it completes the task that it is requested to do. It will be used by real people with a genuine need, and therefore, it must be able to complete the request made by the user.

Privacy - Certain personal information will be stored in the database and/or program, and this information will need to remain hidden in the backend so it cannot be seen.

Accessibility - This is a quick task that will likely be done on a phone and needs to be accessible across all devices.

Future Proofing - This is a big task for this project, but it is very important in the long run to ensure the software will continue to be used.

End User - Any team captain, manager, or junior administrator could use this software; therefore, they all need to be taken into consideration in the development of the project and the end product.

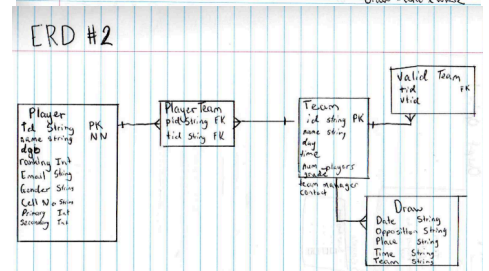

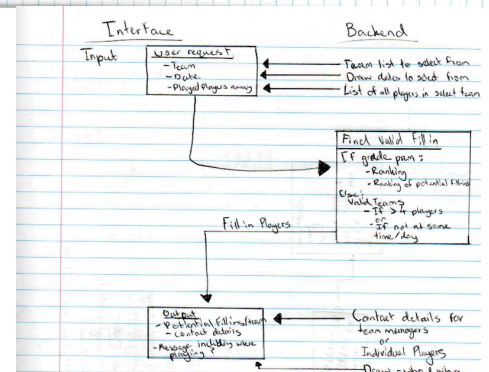

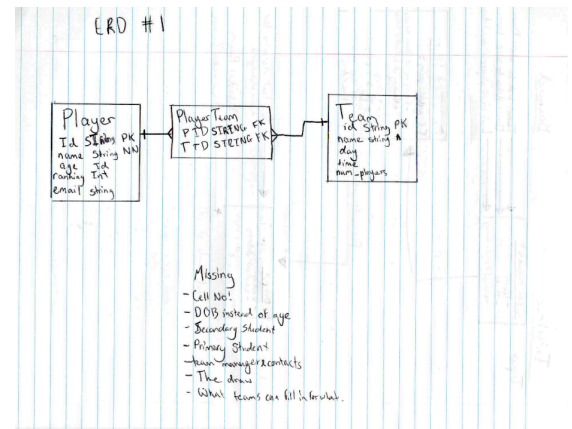

Database Designs

To design the database, I first considered what information I needed, and then I drew out an approximate layout of the entity relationship diagram(ERD).

- Team
- Players
- Player Grading
- Team grade
- Competition day
- Competition time
- Number of players in the team
- Player age/ If in secondary/primary school
- Contact information

At this point, I spoke again to the junior administration and a team manager and realised I was likely missing a lot of information that I needed. So, I decided to draw out a flow diagram of exactly what the program would do so that I could work out what information I would need to store.

From this, I decided that I needed to store the draw so that the user has a list of dates to select from and so that the time and place can be displayed with the outcome, so the user can easily see where the team is playing that week. I also discovered that I needed to store the team manager and their contact information so that the user could just contact the team for a player instead of each person.

Example SQL Queries

Purpose	Query
For the form page, so the user can select a team.	SELECT name FROM Team
For the form page, so the user can select a date.	SELECT date FROM Draw where team = ? Team name
For the form page, the user can select the players from a list provided.	SELECT player.name FROM Player JOIN PlayerTeam ON Player.id = PlayerTeam.player_id WHERE PlayerTeam.team_id = ?;
For the results page, so the user can easily see where and when the team is playing.	SELECT place, time FROM Draw WHERE team = ? AND date = ?;

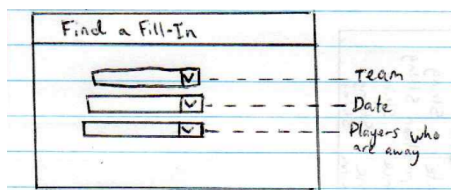

For the results page, find a list of eligible players/ teams with spare players.

* This query has not been written yet, as the eligibility rules for fill-ins are complex and vary between divisions. Further research is required to ensure that the logic accurately reflects current competition regulations, including age groups, grading restrictions, and timing conflicts. This remains a priority, but completing it will require a follow-up conversation with the Junior Administrator, which is already planned. Once I've confirmed all the relevant rules, I will write the appropriate query.

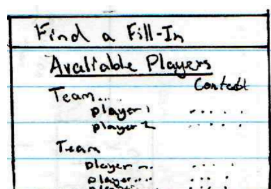

Python Routes

To keep the user experience simple, there are 2 pages:

- / – This is the main landing page. It displays a form where the user selects their team, date they need a fill-in, and the players away. Once submitted, the backend processes the request and redirects the user to the results page.

- /results - This route receives the data from the form. It uses SQL queries to find potential fill-in players or teams with extra players who are available and meet a certain criteria.

The result page displays:

- ❖ A list of available players and/or teams
- ❖ Match time and location
- ❖ Contact details for the team manager

Interface Designs

Fonts

Headings - *Montserrat* – modern and clean font

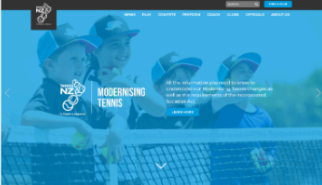

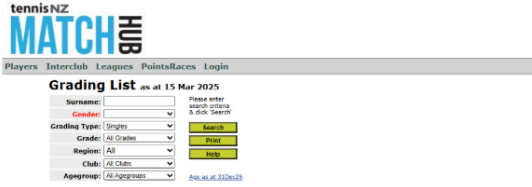

- `"https://fonts.googleapis.com/css2?family=Montserrat:ital,wght@0,100..900;1,100..900&display=swap"`

Body Text: *Open Sans* – clear and readable on all devices, which is important for the accessibility of the website

- "https://fonts.googleapis.com/css2?family=Montserrat:ital,wght@0,100..900;1,100..900&family=Open+Sans:ital,wght@0,300..800;1,300..800&display=swap"

Colour Scheme

I wanted the colour scheme to match or complement existing club/Canterbury tennis websites, so I collated images from these websites and picked two potential designs for my website. The 1st option is based on the Tennis Canterbury websites and designs, and the second is based on both my club (Bishopdale Tennis) and Tennis NZ's MatchHub and Website.

Colour Scheme

1)

FFFFFF

White

2)

FFFFFF

White

```

Logic to find valid fill-ins

- Matching the correct day and time of the match.
- Ensuring the fill-in is from a lower or equal age grade (excluding Premier teams).
- Preventing duplicate players or invalid replacements from higher divisions.

```

10 #filler not any team playing at the same time unless players < 4
11 valid_team_count = 0
12 for team in eligible_teams:
13     if team.day != day or team.time != time:
14         valid_team_count -= team_count
15     else:
16         player_count = conn.execute("SELECT COUNT(*)
17                                     FROM PlayerTeam
18                                     WHERE player_name = ? AND team_name = ?").fetchone()[0]
19         if player_count < 4:
20             valid_team_count += team_count
21             valid_team_names.append(team.name)
22

Feedback

Tester	Feedback	Nexts Steps from this Feedback
Uttara - Programming Student	❖ Breaks when submitted without a player. ❖ Overall, Blank and Bland. ❖ Clean up the layout - Could the results page display players underneath a team header rather than displaying each individually? ❖ Could a photo of the player be displayed?	❖ This needs to be fixed to ensure the page does not crash. ❖ The next iteration will involve adding colour and font and a bit more excitement to the page. ❖ This is useful feedback because it gives me a good idea of how to cleanly lay out the data on the page. ❖ For privacy reasons, this is not possible

	❖ I don't understand what this is for. ❖ Please allow more teams to work. Could we edit the form after submission? ❖ Why is the date in the past?	❖ I will add a header on the page to make it clear ❖ I will add more data ❖ This is not really necessary as it is a very short form and there is no harm in resubmitting it. ❖ For development purposes, I am using the past season draw and data; however, this will be easy to update when development is finished and the information for the new tennis season starts.
End users	❖ Better label on players so you know who is not playing. ❖ Could the ranking for available fill-ins inside be displayed? ❖ Please display the contact information to fill in. ❖ Labels at question. ❖ Call the submit button "find a fill in". ❖ Front page, add colour graphic(Bish tennis logo), more modern look. ❖ Title - Welcome to Bishopdale Tennis Find a Fill in Portal. ❖ Doesn't display available players where teams have a bye. ❖ Could we have another list below that is available with approval?	❖ Will relabel to unavailable player instead of just "player" I will also add a brief description at the top. ❖ Yes, when I add in the prem and senior teams, I will make the rankings available. ❖ Yes, this will happen in a future iteration. ❖ I will label all of the items in the form and add a brief description at the top to make everything clearer. ❖ Yes ❖ This will happen in the next iteration ❖ I will create the top webpage banner ❖ This is something I had not thought about, and it should be sorted in a future iteration to ensure the accuracy of data on my website. ❖ This would be a nice feature to add, which I will if I have time, as it is not strictly necessary.

Next Steps

Place	Action
-------	--------

Form Page	- Set default settings to select an option rather than having a team already in there. - Make it impossible to submit without data. - Ability to select an unknown number of players away when submitting the form. - Add a nice header and description so it is obvious what the website is used for. - Overall design and make it look nice.
Results Page	- Order players by their teams and not name the team each time. - Overall design and make look nice.
Backend	- Fill up the database with more data. - Share the player rankings so that it can be checked for premier teams and senior teams in future.
Extras	- Create html pages for errors

Iteration #3 - Design and Full Functionality

Overview

This iteration involved working on the styling of the webpage and inputting in the rest of the data into the database that is needed for the page to be fully functional.

Welcome to Bishopdale Tennis

Key Features

Database Updates

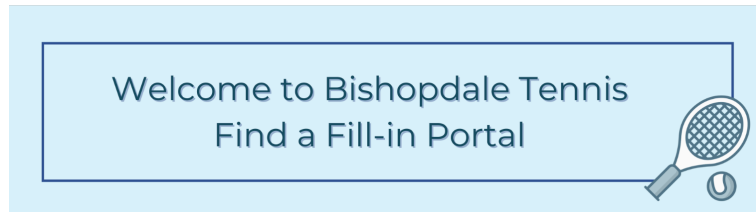

I filled in the database with all of the team player data so that everything for the form that was needed was there. I also added a few more weeks to the draw to allow me to bug test more easily and thoroughly.

Minor Changes were made to the names of the teams. This meant removing the division from the name, as this is stored separately and can change mid-season. Also adding the colour to the name where there are multiple teams in one division to make it easier for the user to select the correct team in the form.

09 Feb 2025 08:00	12U Boys 2	Real	Buckingham Black	Bishopdale	TCL RCL	22 Feb 2025 10:00	Open Boys 2	South Brighton	South Brighton	TCL RCL

Webpage Styling

Using CSS, I have designed both the home and results pages. I used the colour scheme from my original plan, which matches the Bishopdale Tennis Club and Tennis NZ's websites. I also created a web header which feels more welcoming.

```

112 /* form actions */
113 form-actions {
114   grid-area: form-actions;
115   display: flex;
116   justify-content: center;
117   margin-top: 10px;
118 }
119
120 /* Button Styles */
121 button {
122   background-color: #f0f0f0;
123   color: #000000;
124   border: none;
125   padding: 10px 20px;
126   font-size: 1.1em;
127   font-weight: 600;
128   border-radius: 10px;
129   cursor: pointer;
130   transition: all 0.3s ease;
131   font-family: 'Montserrat', sans-serif;
132   text-transform: uppercase;
133   letter-spacing: 0.5px;
134   box-shadow: 0 4px 12px #f0f0f0;
135   min-width: 200px;
136 }
137
138 button:hover {
139   background-color: #e0e0e0;
140   transform: translateY(-20%);
141   box-shadow: 0 6px 20px #f0f0f0;
142 }
143
144 button:active {
145   transform: translateY(0);
146   box-shadow: 0 2px 8px #f0f0f0;
147 }
148
149 /* Results Page Grid Layout */
150 results {
151   background-color: #f0f0f0;
152   border-radius: 10px;
153   padding: 20px;
154   box-shadow: 0 4px 12px #f0f0f0;
155   border: 1px solid #000000;
156 }

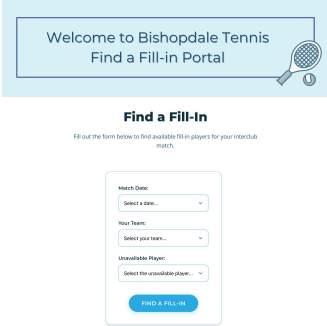

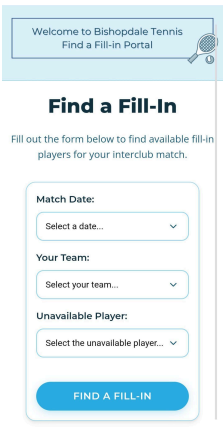

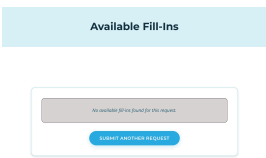

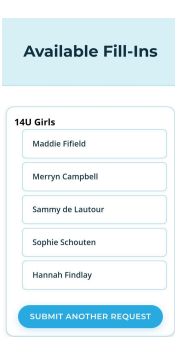

```

Feedback

Tester	Feedback	Nexts Steps from this Feedback
Uttara Programming Student	❖ Nice and simple layout and easy to navigate, not confusing ❖ I like the animation on buttons it's a nice creative touch ❖ When hovering over the fill-in players, it suggests that it is a button (bounces back like a button), but when clicked, it doesn't lead anywhere.	❖ Positive feedback/ improvement from previous feedback that was brought up. ❖ Same as above, this is good feedback as it was positive towards the changes I had made from before. ❖ This is controversial ,as I have other feedback that says the complete opposite of this. However, I intend on making extra information display, like the ranking and contact, to make it seem purposeful.
Benji Programming student	❖ The results page is slightly off-centre. This is annoying ❖ I like how the players shift right when hovering over them. ❖ Align the title ❖ The title on the results page is too small(It looks like the same size as the player names, but just bolded) ❖ Don't like the header font on the results page ❖ Box shadow under player name boxes	❖ I had not noticed this was an issue however, now I have, and it is very annoying, and I will need to fix this. ❖ This is the opposite of previous feedback, so I intend to leave it as it is; however , I will add something extra to make it more purposeful. ❖ This is a design choice that I agree with and will change. ❖ This is another design change that I do agree with, as it is out of proportion. ❖ I have no clue why it doesn't already match the header on the home page, so I will change this to match. ❖ This is an interesting idea, however, I think it would make the page feel cluttered as there is already animation

		happening.
End Users	❖ Add a date picker box instead of a list. Need to grey out not applicable dates. ❖ When names are presented, they look like buttons but don't do anything ❖ Add Team Manager Name and contact info to the top of the list when the fill-in list is returned. ❖ Add fill-ins ranking when clicking on their name ❖ Nice and simple look, and easy to use. Works on laptop and phone.	❖ We tried this and looked at it on a phone, and it was too hard to use, so we decided not to include the calendar and leave it as is because the page is designed mostly for use on a phone. ❖ I am going to add the player ranking as a pop-up when hovering over it to give this purpose. ❖ Will add the team manager and email under the header of the team name. ❖ As said above, I am going to add this when clicking on the name to give the button like names a purpose. ❖ This is a positive comment

Next Steps

Design	- Fix the misalignment of the page - Fix all of the headers and sizing on the results page.
Back end	- Add in the team manager and details. - Add in the player rankings

Git Log for this Iteration

Iteration #4 - Final Features and Cleaning

Overview

This iteration involved finishing up the final features for the website and responding to the feedback from the previous to ensure the website is designed for the end users.

Key Features

Addition of Team Managers and their details

This involved adding the details into the database from the matchhub website. Then I needed to work out which teams had been selected on the results page, find the relevant team managers from the database, and collect their data.

Final Design of the Webpage

Finally, I fixed up a couple of things, like the misalignment on the results page and the font and size of the headings to ensure that it is easy to read and navigate my page. I chose to remove the hover feature and have the player gradings displayed all of the time because after speaking to the end users it didn't feel too cluttered with all of that information on the page and it makes it easier to not have the additional step to hover over the player's name.

Testing

What am I Testing?	How am I testing this?	What do I expect?	What did I get?	Pass/Fail/Notes
Display of team managers	Filling out the form and opening the results page.	The team manager appears on the page with the name and phone number.	14U Girls Team Manager: Andrew deLautour - 021629255	✓

Git Log for this Iteration

Commits on Sep 18, 2025
added in player grading and changed some styling on the results page for each player JWilliams-08 committed 1 hour ago f51869c <>
completed database with all team managers and their contact and added all player rankings JWilliams-08 committed 3 hours ago 3328c89 <>
Commits on Sep 17, 2025
added in team manager details and updated styling to team header for results page JWilliams-08 committed yesterday 3f91f39 <>
Commits on Sep 15, 2025
update to neated code and follow correct layout JWilliams-08 committed 2 days ago 477d829 <>
Commits on Sep 7, 2025
added code to host and test across multiple devices JWilliams-08 committed 2 weeks ago a8676e3 <>

Heuristics/Relevant Conventions

From Original Design

Consistency and Standards/ External Consistency:

This heuristic is about ensuring consistency between other websites and following established design conventions to ensure similar experience and appearance to similar websites and applications. When a user encounters familiar patterns they can navigate easily and complete tasks efficiently. If a webpage isn't externally consistent it can lead to confusion for the user making the overall experience negative.

I designed my page to be externally consistent with other websites associated with the page like the Bishopdale Tennis Club Website and the Tennis NZ website. My colour scheme utilises blues and whites that directly relate to these websites which creates external consistency to them. This design choice makes the user feel comfortable as their page feels familiar to them. The typography on my page uses Montserrat for headings and open sans for body text. This follows modern web standards for readability and professional appearance. Form elements like dropdown menus and buttons adhere to conventional web patterns that users expect which reduces cognitive load and improves readability/usability across the website.

Recognition rather than recall

This heuristic is based on the principle that human memory for recognition is significantly stronger than recall memory. Users find it much easier to recognise information when options are presented to them rather than having to remember specific details from memory. Interfaces that rely heavily on the user's ability to recall information makes the page less accessible or even inaccessible for some so by providing options for the user to choose for less mental effort is needed and it reduces errors making the interface more accessible to all users.

My website prioritises recognition over recall by presenting all available options through drop down menus. Users can select from pre-populated lists of match dates, teams, and even players in the specific team that was selected. This heavily reduces errors that would be caused by the miss spelling of names or team names that would occur if a user was required to type everything out themselves.

Improvements During Development

User control and freedom

This heuristic recognises that users often perform actions by mistake, change their minds during task completion, or encounter unexpected situations like errors. When users feel trapped or unable to easily navigate away from current states, they may experience frustration or anxiety. Providing clear escape routes and navigation options gives users confidence to explore the interface without fear of making irreversible mistakes or getting lost, leading to a more positive user experience.

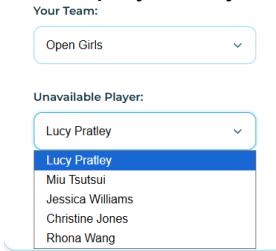

Initially my website lacked proper navigation from error pages leaving users feeling stuck or lost with no obvious route to get where they intended to be. So during development I added clearly marked exit strategies onto my 404 and 500 error pages in the form of a big button labeled return home. This prevents the user from feeling lost or trapped if they end up on an error page and allows them a quick and easy way to return back to where they came from. I also added a submit another request button onto the results page which was also not in my original design. This came after feedback suggesting that it would be nice if there was an easy way for the user to return straight back to the home page after submitting one request so they could submit another one for another player. These improvements improved the navigation in my website and have ensured that the user is able to easily navigate my website and go back to their previous page if they end up lost.

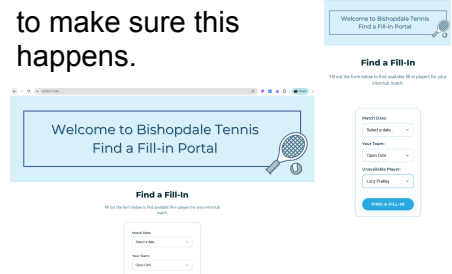

Help and documentation

Typically it is best if a system does not have any additional information on the page to complete tasks successfully however this heuristic is about ensuring users are provided the information they need in order to perform tasks successfully. Effective help and documentation should be easy to find, relevant, and presented in simple terms. If a page doesn't have any help or documentation a user is more likely to feel frustrated or even give up.

Based on user feedback indicating confusion about the system's purpose and what each step of the form meant, I enhanced the documentation available by first adding a bit of context at the top of page “Fill out the form below to find available fill-in players for your interclub match.” This description clarifies the system's function and guides users' expectations. I also added more intuitive titles beside each of the form elements so users didn't mix up the fact that the interface was asking for the match date not the current date or the unavailable player rather than the available ones. These improvements directly respond to issues brought up in user testing and demonstrate how simple details of help and documentation can easily enhance a users experience.

Relevant Implications

Implication	Explanation	Examples of how it is addressed?
Programming		
Functionality	The code must work reliably and handle errors sensibly. The program must provide the intended features without errors, crashing, or other unexpected behaviour.	❖ I have thoroughly tested everything to ensure that no unexpected errors can occur. ❖ I have added in error pages that allow for easy redirection back to the correct page.
End User	The software must meet the needs of the end users for this project. I have worked closely with my end users to ensure this application is created directly for the end users. This involved getting constant feedback from end users and tailoring the application to their needs.	❖ The automatic player lists for each team in the form make it easy for the end user to find the player they want quickly. 
Database		
Future proofing	Future-proofing means designing the database structure and system so it can adapt to changing requirements, handle growth, and remain functional over time without having to redesign it. This includes making it easy to	❖ My database structure separates player information from the team assignments and draws, so new seasons only require updates to the PlayerTeam and draw tables while preserving all historical player and team data.

	update with new data and scale to accommodate more users or features. This is important because technology and requirements change over time, and having to rebuild an entire database is extremely time-consuming.	❖ The database uses flexible fields like 'division' and 'age grade' in the team table, meaning senior teams can also be added in with the same structure but with different values, rather than requiring new tables or a redesign of the tables.
Ethical	This means that the data stored in the database must be correct and only what is necessary for the function of the program to protect the privacy of members.	❖ I have also ensured that the data I have used is accurate and correct. I have done this through testing of my page, checking, and comparing the data I have stored to ensure it is correct with the data on the official page of Matchub. ❖ The database enforces the Canterbury tennis guidelines by only outputting players who meet a certain requirement. For example, when a request is made for a team, fill-in only teams from a lower division or the next youngest age group are displayed. This means that fill-ins follow the rules so that matches are fair. ❖
Website/Media		
Accessibility/Usability	Accessibility refers to designing websites so they can be used by people with a wide range of abilities and disabilities, including visual, motor, auditory, and cognitive impairments. It also means ensuring the website works across different devices or browsers. This is important because it ensures equal access to information and functionality for all users, regardless of their physical capabilities or the technology they are using.	❖ Accessibility across multiple devices is especially important for my website, as most of its use would be on a phone. I have made sure to design the page so it looks good on multiple screen sizes and have tested to make sure this happens.  ❖ The text and font are simple and easy to read, so that anyone, even with low vision or vision impairment, can easily read it.

		❖ I have also designed the buttons to be big so that anyone can easily push them, including those with shaky hands. I tested this with users who have difficulty sometimes with buttons and technology, and they found it easy to do so.
Aesthetics	Aesthetics refers to the visual design and appearance of the website, including color schemes, typography, layout, and visual elements. Having good aesthetics creates an attractive, professional interface that enhances usability by making information easy to find and understand, while also creating a positive response from users. This is important to my website design as a poor visual design can decrease the functionality of the website or make it unpleasant to use.	❖ I have used a blue and white colour scheme in my website that matches the existing pages belonging to Bishopdale Tennis Club. This creates a sense of familiarity for the users as it matches the club's existing brand while maintaining a professional look. ❖ I have designed the form with a clear and simple layout and a bright blue submit button at the bottom, which draws the attention of the eye, making the user's next steps obvious. ❖ I have used plenty of whitespace around the form elements to prevent the page from feeling too cluttered or overwhelming. ❖ There is consistent blue and white styling among the pages to create a cohesive experience that feels professional to users.
